### 1. Variable, Attribute, and Constant Declaration Defects (VC)

- ☒ Are descriptive variable and constant names used in accord with naming conventions?
- ☒ Are there variables or attributes with confusingly similar names?
- ☒ Is every variable and attribute correctly typed?
- ☒ Is every variable and attribute properly initialized?
- ☒ Could any non-local variables be made local?
- ☒ Are all for-loop control variables declared in the loop header?
- ☒ Are there literal constants that should be named constants?
- ☒ Are there variables or attributes that should be constants?
- ☒ Are there attributes that should be local variables?
- ☒ Do all attributes have appropriate access modifiers (private, protected, public)?
- ☒ Are there static attributes that should be non-static or vice-versa?

### 2. Method Definition Defects (FD)

- ☒ Are descriptive method names used in accord with naming conventions?
- ☒ Is every method parameter value checked before being used?
- ☒ For every method: Does it return the correct value at every method return point?
- ☒ Do all methods have appropriate access modifiers (private, protected, public)?
- ☒ Are there static methods that should be non-static or vice-versa?

### 3. Class Definition Defects (CD)

- ☒ Does each class have appropriate constructors and destructors?
- ☒ Do any subclasses have common members that should be in the superclass?
- ☒ Can the class inheritance hierarchy be simplified?

### 4. Data Reference Defects (DR)

- ☐ For every array reference: Is each subscript value within the defined bounds?
- ☐ For every object or array reference: Is the value certain to be non-null?

### 5. Computation/Numeric Defects (CN)

- ☒ Are there any computations with mixed data types?
- ☒ Is overflow or underflow possible during a computation?
- ☒ For each expressions with more than one operator: Are the assumptions about order of evaluation and precedence correct?
- ☒ Are parentheses used to avoid ambiguity?

### 6. Comparison/Relational Defects (CR)

- ☒ For every boolean test: Is the correct condition checked?
- ☒ Are the comparison operators correct?
- ☒ Has each boolean expression been simplified by driving negations inward?
- ☒ Is each boolean expression correct?
- ☒ Are there improper and unnoticed side-effects of a comparison?
- ☒ Has an "&" inadvertently been interchanged with a "&&" or a "|" for a "||"?

## 7. Control Flow Defects (CF)

- ☒ For each loop: Is the best choice of looping constructs used?
- ☒ Will all loops terminate?
- ☒ When there are multiple exits from a loop, is each exit necessary and handled properly?
- ☒ Does each switch statement have a default case?
- ☒ Are missing switch case break statements correct and marked with a comment?
- ☒ Do named break statements send control to the right place?
- ☒ Is the nesting of loops and branches too deep, and is it correct?
- ☒ Can any nested if statements be converted into a switch statement?
- ☒ Are null bodied control structures correct and marked with braces or comments?
- ☒ Are all exceptions handled appropriately?
- ☒ Does every method terminate?

## 8. Input-Output Defects (IO)

- ☐ Have all files been opened before use?
- ☐ Are the attributes of the input object consistent with the use of the file?
- ☐ Have all files been closed after use?
- ☐ Are there spelling or grammatical errors in any text printed or displayed?
- ☐ Are all I/O exceptions handled in a reasonable way?

## 9. Module Interface Defects (MI)

- ☒ Are the number, order, types, and values of parameters in every method call in agreement with the called method's declaration?
- ☒ Do the values in units agree (e.g., inches versus yards)?
- ☒ If an object or array is passed, does it get changed, and changed correctly by the called method?

## 10. Comment Defects (CM)

- ☒ Does every method, class, and file have an appropriate header comment?
- ☒ Does every attribute, variable, and constant declaration have a comment?
- ☒ Is the underlying behavior of each method and class expressed in plain language?
- ☒ Is the header comment for each method and class consistent with the behavior of the method or class?
- ☒ Do the comments and code agree?
- ☒ Do the comments help in understanding the code?
- ☒ Are there enough comments in the code?
- ☒ Are there too many comments in the code?

## 11. Layout and Packaging Defects (LP)

- ☒ Is a standard indentation and layout format used consistently?
- ☒ For each method: Is it no more than about 60 lines long?
- ☒ For each compile module: Is no more than about 600 lines long?

## 12. Modularity Defects (MO)

- ☒ Is there a low level of coupling between modules (methods and classes)?
- ☒ Is there a high level of cohesion within each module (methods or class)?
- ☒ Is there repetitive code that could be replaced by a call to a method that provides the behavior of the repetitive code?
- ☒ Are the Java class libraries used where and when appropriate?

N/A no arrays  
13 Storage Usage Defects (SU)

- ☐ Are arrays large enough?
- ☐ Are object and array references set to null once the object or array is no longer needed?

14. Performance Defects (PE)

- ☒ Can better data structures or more efficient algorithms be used?
- ✓ ☒ Are logical tests arranged such that the often successful and inexpensive tests precede the more expensive and less frequently successful tests?
- ☒ Can the cost of recomputing a value be reduced by computing it once and storing the results?
- ☒ Is every result that is computed and stored actually used?
- ☒ Can a computation be moved outside a loop?
- ✓ ☒ Are there tests within a loop that do not need to be done?
- ☒ Can a short loop be unrolled?
- N/A ☒ Are there two loops operating on the same data that can be combined into one?
- ☒ Are frequently used variables declared register?
- ✓ ☒ Are short and commonly called methods declared inline?

É a parte da interface gráfica alguns destes pontos podem não ser os mais adequados para este tipo classe
